

I strongly support RM-10352. As an active amateur radio operator (K2RD) with over 25 years experience utilizing this band, I feel that it is now necessary to formally separate usage of the band between wide-band and narrow-band emissions. The band has seen significant growth in popularity in recent years and will undoubtedly see further growth as the sunspot cycle declines. With current and future levels of activity, the proposed formal designation of mode frequency limits will contribute to more efficient and effective spectrum utilization and provide the amateur community a formal basis upon which to self-police individual behaviors.

I strongly recommend that the Commission act favorably towards this petition as being in the best interest of the evolving usage amateur radio service.

Respectfully submitted,

Ira Stoler
K2RD
